

Eliminate Policy Fraud and Improve Efficiency Using emSigner

The insurance industry has long been plagued by the issue of fake insurance policies. As per experts, one of the main reasons why insurance companies are struggling to weed out this impediment is the complex nature of insurance transaction processing, including the extent of reliance on third party service providers.

But we have a solution to this problem! And it is emSigner, eMudhra's industry leading paperless office solution with strong digital signing and workflow management capabilities. Using this innovative solution, insurance companies can seamlessly generate insurance documents in bulk and incorporate high-end security features such as digital signature and hybrid QR code on these documents, which are impossible to replicate, thereby putting a stop to the menace of policy frauds.

Here are some of the highlights of this new-age paperless office solution:

- emSigner can pull data from any server and feed them into a document creation engine to generate policy documents in bulk
- emSigner allows you to add authenticity and integrity to policy documents by electronically signing them using legally valid electronic or digital signature
- Using emSigner, you can embed a secure QR code in the policy documents, which can be used to verify the authenticity of the document when printed

There are plenty of other ways in which emSigner can augment your operations. Get in touch with us at eservices@emudhra.com to learn more.
