

Secure Digital Diplomas—emSigner

Every year 40,000 to 45,000 students graduate and earn their PhD degrees in the US. However, the number of fake PhD degrees that are churned out by diploma mills during the same period exceeds 50,000. What this shows is that one in every two person claiming to have a PhD degree in the US has a fake degree.

This problem is not just limited to the US. In France, for instance, 33% of applicants have a fake diploma and this number is almost the same in the United Kingdom, as per the official organisation in-charge of diploma authentication in these countries. While in countries such as India and China where number of issuing organization is staggering, these numbers can go beyond imagination.

However, we have a solution to this nagging issue that is negatively affecting students and universities alike. Secure Digital Diplomas generated using emSigner suite can completely eliminate the menace of fake diplomas and ensure that qualified students reap in the rewards of their hard work.

Here are some of the highlights of our emSigner suite:

- emSigner uses our document creation engine to automate the process of diploma generation by integrating with your DB or through bulk CSV/XLS upload
- emSigner uses the power of PKI to not only facilitate digital signing but to also generate a secure QR code which can be used by anyone to verify the authenticity of the diploma (online/offline)
- emSigner ensures ease of use and accuracy with a three step workflow and an option to provision an 'approver' to allow for a second pair of eyes before signing
